

## OSPREY AND MEGUMAGOLD PROVIDE OPERATIONS AND EXPLORATION UPDATE

**August 10, 2020**

**Halifax, Nova Scotia / Vancouver, British Columbia - MegumaGold Corp. (CSE: NSAU, OTC: NSAU, FWB: 2CM2) (“MegumaGold”) and Osprey Gold Development Ltd. (TSXV: OS) (“Osprey”) are pleased to provide the following update on their corporate operations and exploration-related activities.**

As Meguma and Osprey work toward finalizing the previously announced plan of arrangement (see joint news release dated June 10, 2020), management and technical teams from both companies have been reviewing data from the combined project portfolio and prioritizing targets, budgets, and work plans for an aggressive first phase of work expected to commence immediately following the closing of the plan of arrangement. The combined database supports plans for an extensive multi-phase drilling campaign to test numerous targets on several projects within the combined portfolio. The initial exploration focus of the combined entity will be developing target areas within a close proximity of St Barbara Limited’s (“St Barbara”) operating Touquoy Mine in the Moose River Gold Mines area, which includes Osprey’s Caribou project and MegumaGold’s Killag and Touquoy West properties.

“We’ve been very busy over the past couple of months on the corporate side, working with MegumaGold to complete the proposed business combination in early September 2020”, said Osprey President Cooper Quinn. “Contemporaneously, we have been working on the technical and exploration side; communicating closely with MegumaGold’s technical team to prioritize projects across the combined company and ensure a seamless transition. The exploration potential of the combined land package has yet to be materially tested, and we’re excited to be prioritizing drill targets which we believe have the potential to expand our existing gold resources, and potentially discover new disseminated gold deposits in the area. I look forward to drilling these exciting targets.”

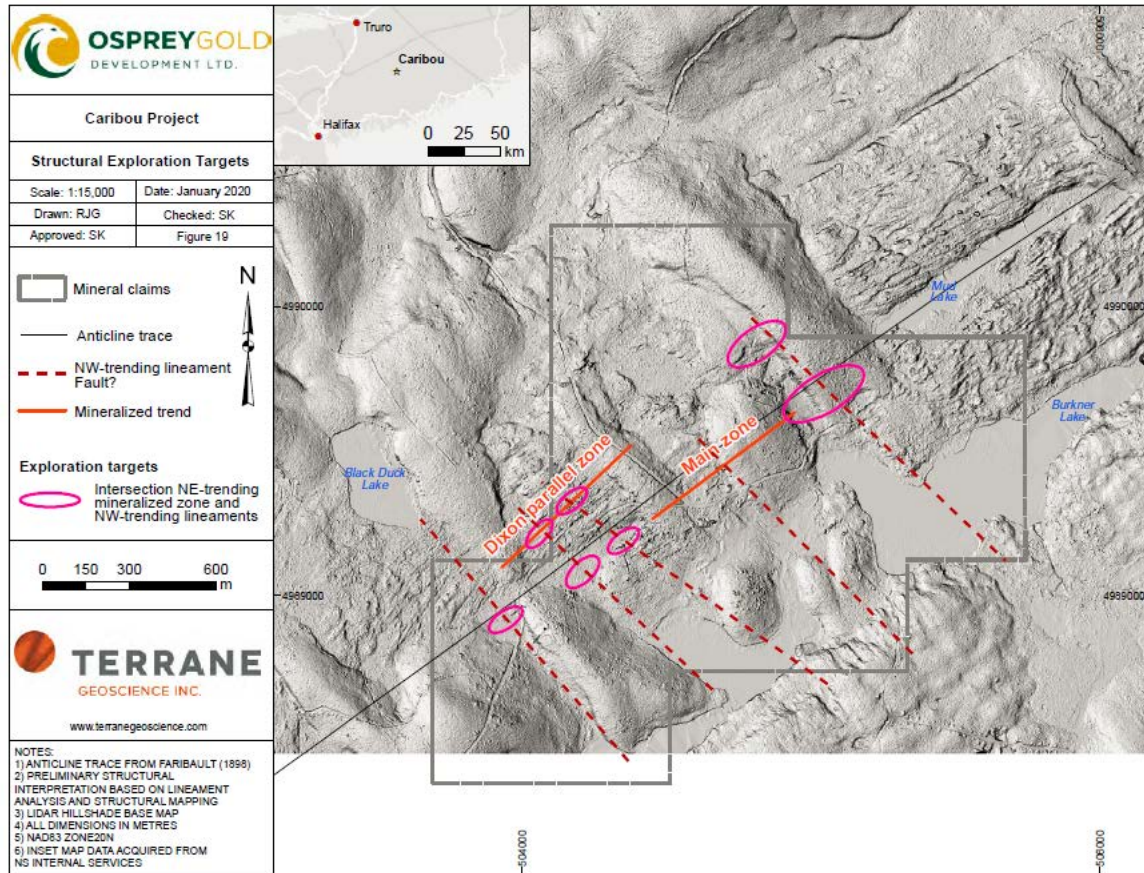

MegumaGold President Theo van der Linde commented, “Our team has been working diligently on developing high priority targets at the Touquoy West property. These target areas are represented by large newly identified soil and IP anomalies, which have yet to be drill tested. Our recent exploration activities have confirmed that disseminated sulphide mineralization is present in the Moose River anticlinal structure and we are continuing to expand on that story as the Touquoy West property takes shape. Concurrently, our amalgamation with Osprey provides shareholders of both groups with a very compelling story of exploration successes and mineral resources in the Caribou deposit.”

### **Exploration Objectives**

- Near term – to complete exploration permitting and commence drilling programs at Caribou, Killag, and Touquoy West
- Medium term - to delineate additional Mineral Resources, and advance existing exploration targets through discovery drilling
- The goal is to advance existing early-stage exploration targets to deliver initial Mineral Resources and incorporate them into the combined Company’s resource inventory over multiple deposits

**Caribou Property**

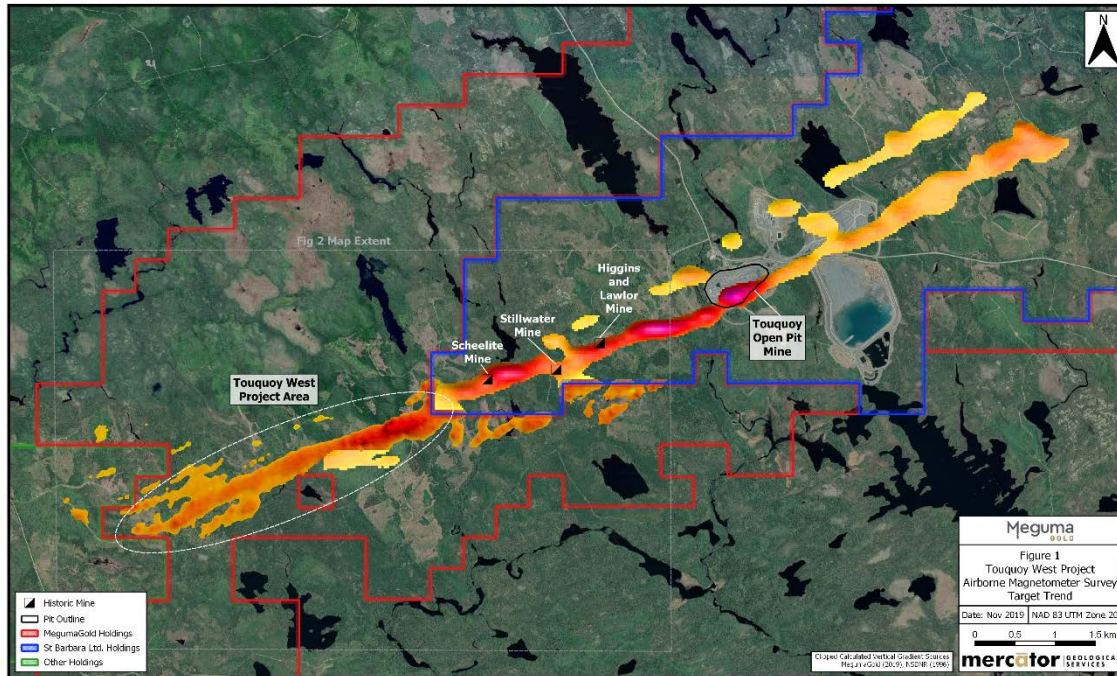

During 2019, Osprey conducted UAV geophysical surveys over the Goldenville Gold Project and the Caribou gold project, the latter of which is located approximately 12 kilometers on existing roads from St Barbara Minerals Moose River Consolidated operating mill. Magnetic and ortho-imagery were collected and compiled. When combined with existing data on geology and mineralization, detailed structural analysis was completed, and areas were highlighted for future exploration and drill work. Specifically, northwest-trending lineaments were identified that intersected with areas of known mineralization, and lesser explored areas.

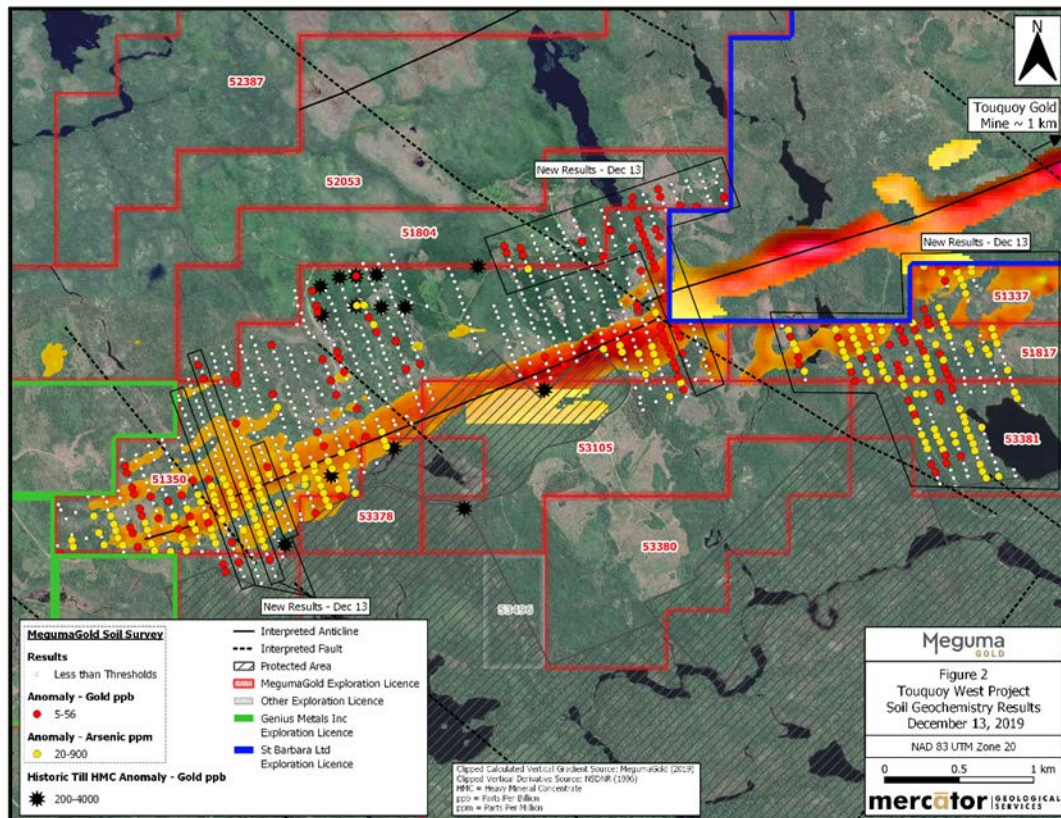

**Touquoy West Property**

The Touquoy West property covers approximately 5 km of strike length along St. Barbara’s southern claim boundary, south and west of the operating Touquoy Mine. During the 2019 field season, MegumaGold identified three main target areas at Touquoy West via ground magnetometer surveys, a very low frequency electromagnetic (VLF-EM) ground survey, a detailed B-horizon soil geochemistry survey, and 25.83 line kilometers of Induced Polarization (IP).

Combined results of these programs define three high priority target areas on the Touquoy West property. The IP survey chargeability responses detected at Touquoy West, which are in part spatially associated with existing soil geochemistry, magnetometer, and VLF-EM anomalies, may indicate the presence of disseminated sulphide mineralization similar in style to that present adjacent to the Touquoy gold deposit located a few kilometres to the east along the Moose River Anticlinal trend.

MegumaGold President Theo Van der Linde stated, “These are exciting targets that represent valuable information not previously known in the area and our team is currently permitting these targets and preparing for a maiden diamond drilling campaign.”

The three main arsenic-gold anomalies referred to in the figures above parallel the interpreted northeast trend of the Moose River anticlinal fold corridor and are developed in areas either directly overlying, or to the south of, the interpreted main fold hinge zone. This fold corridor structural association is interpreted by the Company to have geological similarities to that of the Touquoy Gold Mine deposit, located within the same anticlinal corridor approximately 2.5 km northeast of the new anomaly described above. As reported previously, the western-most anomaly on the Touquoy West Project survey grid remains open onto the adjacent Genius Metals Inc. property to the west that was optioned by MegumaGold.

### **Qualified Person Statement and Cautionary Statements**

This press release has been reviewed and approved by Regan Isenor, Chief Executive Officer of MegumaGold Corp. Paul Ténière, M.Sc., P.Geo. of Mercator Geological Services Ltd. and Perry MacKinnon, P.Geo., Vice President of Exploration of Osprey, both “Qualified Persons” as defined under NI 43-101, have prepared and approved the scientific and technical information disclosed in this press release.

This press release contains scientific and technical information with respect to adjacent or similar mineral properties in the Meguma goldfields and Touquoy Gold Mine deposit, which the Company’s have no interest in or rights to explore. Readers are cautioned that information regarding mineral resources, geology, and mineralization on adjacent or similar properties is not necessarily indicative of the presence of mineralization on the Company’s properties.

### **About MegumaGold Corp.**

MegumaGold Corp. (CSE: NSAU, OTC: NSAUF, FWB: 2CM2) is a Canadian junior gold exploration company engaged in the business of acquiring, exploring and developing natural resource properties. MegumaGold has centered its exploration focus on the developing Meguma formation of Nova Scotia. As a result, MegumaGold has assembled a strategically positioned, district-scale tenure position of 107,114 hectares within the Meguma Gold District. For additional information, please visit MegumaGold’s website: <http://www.MegumaGold.com>.

### **About Osprey Gold**

Osprey (TSXV: OS, OTCQB: OSSPF) is focused on exploring five historically producing gold properties in Nova Scotia, Canada. Osprey has the option to earn 100% (subject to certain royalties) in all five properties. For additional information, please visit Osprey’s website: [www.ospreygold.com](http://www.ospreygold.com).
